

DUERF is an innovative company specializing in the production of adhesives for the composite sector. It focuses on the dispersion of polymeric adhesives in both aerosol and airless forms, available in reusable or disposable containers.

The company's laboratories develop and test bonding agents tailored for various infusion resins, including epoxy, vinyl ester, and polyester.

Additionally, DUERF manufactures adhesives designed to reinforce the marble blocks with fiberglass and epoxy compounds through the vacuum process.

The company has also developed significant expertise in creating reusable airless dispensers (EUCYL) for its adhesives. These devices are designed to minimize environmental impact, thereby supporting their customers in transitioning to more sustainable practices.
