

LIKN SUPERABRASIVE Introduction

As a professional construction and stone supplier with over 30 years of experience, LIKN SUPERABRASIVE has been committed to development for decades. Thanks to customers' support, we continue to develop new bonds through R&D and innovation. Sourcing products with the optimal performance-cost ratio has always been LIKN's goal. Collaborating with users to develop new products that bring them greater convenience, safety, and cost savings has become LIKN's development philosophy. We always care about, design for, and supply products that meet customers' needs. Experience the difference, and you will be surprised! Welcome to LIKN Superabrasive.

We offer a wide range of polishing and grinding tools, as well as metal and resin bond floor solutions. As basic knowledge, there are generally two main applications for floors. Here we introduce more details, such as PCD, PDC, and hybrid types for floor grinding solutions:

1. PCD and hybrid types: These are widely used for removing all coatings such as glue, epoxy, paint, lacquer, acrylic, and residues.
2. TC carbide: Available in various sizes for different machines, used to level the floor after the first step, with a wide hardness range to meet different requirements.
3. Traditional metal bond: Offered in various sizes and grit combinations matching the above bonds, suitable for different concrete hardness levels.
4. Traditional resin bond: LIKN retains the same grits and wet/dry bond options as other suppliers, but has developed more designs and assemblies. You can see various parts that are widely used for a broader range of machines.

LIKN floor grinding solutions offer unlimited applications. We have developed and will continue to develop all grinding and polishing concepts from other materials into the construction and stone industry. Imagine it—let us turn your dream into reality! All LIKN grinding plates and heads are compatible with HTC, Diamatic, Blastrac, SASE, Lavina, and Innovatec grinding machines.
