

For more than a decade we supply Albanian Stones to customers all over the world.

We profit from our own quarries and our products are of highest quality. Our philosophy is to provide our customers with high quality products, supplied "in time".

Our range includes floor and wall tiles, wall stones, garden elements in natural stone and any kind of cut to size dimensional stone in accordance with clients specification.

We are glorious to resume offering to the world our Alba Green, which is identical to Pietra serena, used by Michelangelo, a typical stone of Florence architecture.

Further, our quarries – situated in Tomorr, Albania – guarantee large quantities of stone from sites at altitude over 1500 metres, in the form of quarry face slabs. The stone is certified with the CE mark and is available in characteristic colours from various shades of yellow-beige to blue-grey. The blue Stone is unique for its light grey color and light blue shade. It has a very antiqued wavy texture that appears like old reclaimed stone on the Italian historical square.

The variegated Beige Natural Stone has the rare characteristic that natural split surface is very flat. Tumbled surface is perfect for the wall and the floor, for inside and outside usage.

The aesthetic result obtained is unique with the following characteristics:

- Surface result is obtained with the combination of natural split tumbled and antiqued wavy time worn surface.
- None of the tiles is the same with each other as the percentage of the two textures is always randomly following the natural split surface of each tile.
- Unbeatable price.

Our company offers solutions in natural stones for housing: public and private areas, urban areas: pedestrian areas, areas with traffic, urban furnishing, outdoors: greenery, gardens, parks, residential furnishing elements. ALBASTONE offers exclusive handmade stone works from various quarries in Albania.
