SUBJECT: MAXFONE | Analysis and management of production data

MAXFONE is the Digital Enabler able to change data into precious and relevant informations to drive Small and Medium Enterprise (SMEs) towards the digital transition in a responsible and sustainable way.

MAXFONE offers its services, such as the digital analysis and data management solutions, with the aim of optimizing processes and reducing costs through:

- the most efficient use of resources (water, air and consumables);
- the ability to foresee maintenance and intervention needs on industrial machinery and installations;
- the environmental impact's measurement of production processes and individual items produced;
- the quality standards improvement of processed products;
- the reduction of energy consumption by up to 20%;
- the solutions can be purchased through incentives both linked to the 4.0 and 5.0, in line with the last decree-law approved on the digital transition (law n° 56/2024, art. 38, paragraph 4).

Thanks to **MAXFONE "IDA-IoT Data Analytics"** application it's possible to monitor all production parameters to have under control in real time all industrial processes, processing cycles of each order, operator or material time, equipment performance, machine downtime, energy consumption (compressed air, CO_2, water).
