Leica Geosystems: Precision Measurement Solutions for the Stone Industry

As a division of Hexagon, a global leader in digital solutions, Leica Geosystems has been at the forefront of precision measurement for over two centuries.

With a global footprint and local Sales Organizations & Service Support in over 120 countries, we provide innovative hardware and software solutions to meet the diverse needs of industries ranging from construction and surveying to manufacturing and engineering.

Our comprehensive portfolio includes solutions for capturing and analyzing data from individual points to extensive 3D scans.

Launching Leica iCON trades: Digital Templating Redefined

Introducing Leica iCON trades at Marmomac 2024, our cutting-edge solution for digital templating in the stone industry. This innovative solution combines laser technology and a wireless measuring pen with a dedicated CAD Software to:

- **Capture shapes and dimensions accurately:** Create precise digital templates of any surface, from any location
- **Optimize cutting and fabrication:** Minimize measuring time, export digital data to CNC to avoid errors and reduce costs and material waste.

Leica iCON trades is your peace of mind for an efficient and streamlined digital templating workflow.
